

VIRTUAL COACH

Online training system and development

Virtual Coach, our very own online training system, is an extremely cost-effective way of supporting and developing staff.

Virtual Coach offers interactive, 'bite sized' learning modules that staff can complete at a time to suit them and you.

QCONZ design and build online training courses for our business, and for our clients, to help transfer knowledge and train staff.

Users can be tested as they are trained, and all records can be stored in our Learning Management System (LMS).

How it works

Virtual Coach Player is the program that we use to play our eLearning courses.

Virtual Coach Developer is used to design and build eLearning training courses.

eLearning courses are uploaded and hosted on a server and accessed on or offline through Virtual Coach Player. The user logs in, is presented with a list of courses to complete, and simply selects a module to start.

After completing a module, the module attempt and assessment results are captured. All data is stored in the **Learning Management System** and can be used to report individual results or company-wide training records.

Virtual Coach helped our business go from good to great

Virtual Coach has allowed our clients to enjoy:

- Blended learning - classroom training followed up with an online refresher course
- Comprehensive video-based training on standard operating procedures
- Calibration training to align staff ratings when assessing quality programmes
- Train the trainer courses to upskill staff who deliver training
- Installation and service support training
- Multiple languages options while using the same visual content.

Bringing eLearning to life

Virtual Coach is self paced, fun and interactive

Benefits of Virtual Coach online training

- Captures knowledge and makes it accessible to others
- Supports learning - self paced, fun and interactive
- Available any time and any where
- Gauges understanding of a topic or training
- Stores training records for compliance and auditing purposes
- Cost effective, saving on travel and accommodation
- Offline option where connectivity is an issue

Features of Virtual Coach

- Login access via web browser (pc, laptop, smartphone) or offline windows player
- Incorporate free text, images and graphics, pdfs, sound, videos, weblinks and more
- Assessment options - multi-choice, true/false, drag and drop
- Display on-line content such as live websites or YouTube
- Interactivity - drag and drop, pop ups activated on roll-over or click, timed in content
- Completed modules and assessment results are auto-captured in LMS
- Tracks length of time in a module, on an assessment, mouse clicks
- Caters for multiple languages
- Hosted on a server and available on or offline

Case Study - DairyNZ

To align with their Milk Smart programme, our client required a simple online training solution to share knowledge and help improve milking efficiency and comfort on farm.

The training needed to be accessible by all dairy farmers throughout New Zealand and able to be completed at a time that suited them best. The solution needed to be available without the need for individual logins.

The result is a Virtual Coach course that is seamlessly integrated into the DairyNZ web browser.
