

# SYNC

The way a business captures and manages quality assurance data can result in reduced productivity, inefficiencies and poor communication within teams.

QCONZ have helped clients to overcome this issue by developing electronic data solutions to help better manage this process and improve business intelligence through reporting.

## *Electronic form creation and data capture app*

**SYNC** is an electronic data capture solution for efficient flow of information between you and your team across a mobile network.

### How it works

SYNC provides a simple interface for users to design and build electronic forms for entering data.

A form is assigned to staff via their smartphone SYNC app. Once the form is downloaded staff can enter information into the form while carrying out their work.

The data syncs and you will start receiving data from your team for reporting purposes.

### Benefits to your business

- Cost effective, paperless system
- Simple and efficient data capture
- Streamlines check processes
- Real time oversight
- Allows customised reporting and performance monitoring of your team

### Features

- Easy form template design and update
- Choose from a large list of field types
- Add free text data, photos, videos, sound bites, signatures, barcode and more
- GPS location of user can be tracked
- Automatically sends submitted form to custom email
- Multiple data export options
- On/offline functionality which syncs when connected
- Web interface for non-mobile users
- For Android and Apple devices
